

IMPORTANT PRE-INSTALLATION NOTE

Congratulation with your new GTConnect. Please follow these few step prior to installing the control unit for the first time.

- Connect the GTConnect via LAN and power op the unit. This will take several minutes and assure that your GTConnect has the latest available firmware installed.
- To verify firmware ver. press button “B” – the version no. will be shown in the display.

If your new installation is set to run on 3G modem you will have to set the APN while the GTConnect is still connected via LAN (you can get information about the APN from your mobile provider, often this information is found on their website)

- Access GTOonline and select “System maintenance”
- Select “APN settings”
- Fill in the “APN field” with the provided APN address
- Fill in “Device key” you uptain the device key by pressing button “A” – the key will be displayed in the display on your GTConnect
- Press “save”
- Within 2 minutes your GTConnect will restart and you will receive the following message in the display: “New APN OK....Restart”
